

THE DNI DIFFERENCE

At DNI, our objective is to gain an understanding of your business direction and goals. Formulated by a review of your current technology environment and challenges, we work with you to devise solutions specific to your technology environment, providing strategic guidance with present and future technology projects. Paying careful attention to identified risks, operational system requirements, and process enhancements with technology, we help to attain maximum end-user productivity while reducing your total cost of ownership of technology.

As your IT partner, we strive to become your trusted advisor, who understands your business and the challenges you face everyday. Focusing on your unique needs, our professional team collaborates with you to implement the best strategy and technology solutions that directly serve your business initiatives. We maintain a start-to-finish partnership that delivers results as well as accountability. Our goal is to meet your needs, and exceed your expectations.

Business Objectives

- ▶ Provide services for small and medium sized businesses for existing or new computer network technology environments: networks, servers, PCs, websites, telecomm designed to reduce Total Cost of Ownership (TCO) and deliver effective Return On Investment (ROI)
- ▶ Understand your business objectives, assess your current technology challenges, and help formulate a strategy based on your timeline and budget needs

Summary

We develop and implement the right management, support, and training plan with you to fully leverage your investment in your existing staff while taking advantage of the broad portfolio of managed services we offer. From operational management and support, on-site or remote network management, phone support and training, to fully managed and hosted systems, we can provide you with the best solution possible.

DNI Solutions

- ▶ Provide computer & network consulting, solutions, implementation, and support geared to optimize your business operations and budget
- ▶ Provide service at virtually every level of technology for your environment: CIO level planning, system network administration, web development, and intermediary application support services
- ▶ Technical consultation, budgeting, network performance improvement and your choice of managed service plans designed to fit your needs and budget
